

Visionary Software

LLC

INVESTMENT PROPOSAL

We build **the way in.**

A software studio shipping **accessible-first professional software** — we find where the industry locked people out, by disability, price, or design, build the bridge, and own the niche.

AccessBridge
PLAYABLE BY EAR

Launch product. Serato DJ Pro & djay Pro, playable by ear — working software in testers' hands today.

INVESTMENT PROPOSAL • 2026 • CONFIDENTIAL

DJ BREEZY WONDER • FOUNDER

We build **the way in.**

A studio that ships **accessible-first professional software**. Wherever the industry locked people out — by disability, by price, by design — we build the bridge in, and we own the niche.

01

Find the locked door

Where has a pro tool shut people out — by disability, price, or design?

02

Build the bridge

Ship the tool that truly gets them in — honest, reliable, accessible-first.

03

Own the niche

Become the default no competitor clones in a weekend; earn the moat.

04

Run it again

Take the same playbook to the next locked door — FLSpeaks for FL Studio, and on.

AccessBridge is the first door — the launch product, and the proof the model works; **Visionary Software exists to open the rest.** The same playbook is already running again on the next locked professional-creative tool — FLSpeaks, product #2, in active build.

The industry-standard tools are a locked room.

2 / 124

Of Serato's entire interface, a screen reader can read **two elements out of a hundred and twenty-four**. Access broke at v1.8 and was never restored.

Serato was screen-reader usable through version 1.7; the 1.8 interface rebuild broke that access, and Serato has never restored it.

— SERATO DJ PRO

Virtual DJ's custom skinned interface is not compatible with screen readers; blind users depend on a third-party workaround, not native support.

— VIRTUAL DJ

Don't make the **screen** readable. Get the **facts** out — and say them out loud.

01

Reads from the inside

Reads Serato's live internal state directly — deck, time, key, BPM, cues, effects, crates — and djay through the Mac's own accessibility system. Nothing guessed; if it can't read something, it says so.

02

Names the hardware

Plug in a controller and every knob, pad and fader announces what it does the moment you touch it — with zero setup. A blind DJ could never map by sight; AccessBridge ships that knowledge built in.

03

Speaks, and drives

One clean voice — it can even speak through the screen reader the DJ already trusts — and it drives the software back: load a track, set a cue, sort the library, jump a beat.

LAUNCH PRODUCT — ACCESSBRIDGE

TWO PROGRAMS • TWO DOORS IN

Opposite problems, one seamless experience.

SERATO DJ PRO — BUILT TO BE SEEN

Read from the inside

2 of 124 elements readable • no official way in

A small component rides safely **within Serato** and reads its real, live objects directly — read-only, with **no screen capture and no fake clicks**. Serato even names controls standalone, from AccessBridge's own IP-clean profiles.

DJAY PRO — ALREADY ACCESSIBLE

Name the hands

Won a 2016 Apple Design Award for accessibility

djay already publishes its decks, times and library to the Mac's accessibility system — so AccessBridge doesn't re-read it. It does the one thing djay can't: **name the controller** under the DJ's hands.

LAUNCH PRODUCT — ACCESSBRIDGE

SHIPPED — NOT A PROMISE

What works today.

- **Reads all four decks** — track, artist, BPM, key, time left, and the live pitched tempo.
- **Speaks effects, loops, beat-jumps, hot cues** — and the whole library and crate system.
- **Speaks the moment a control moves** — no lag, at the pace of the wheel.
- **Names any supported controller on touch** — in both Serato and djay, with no setup.
- **Drives Serato** — loads tracks (incl. streaming), sorts, searches, files & removes, works the online catalogue.
- **Quiet menu-bar app, full keyboard console** — in testers' hands now.

Not something a competitor clones in a weekend.

~30K

lines of Swift / C++, built and rebuilt

470+

automated tests — every claim proven on real hardware

0

official APIs — no door was left open on purpose

100%

original, IP-clean controller data — lifted from no one

Months of reverse-engineering: reading Serato's private state without disturbing the app or the music, wall after wall climbed or honestly ruled out. **That hard-won knowledge, done reliably and honestly, is the real moat** — and it is largely done.

PRODUCT TWO · IN ACTIVE BUILD — THE BRIDGE IS PROVEN

THE PIPELINE — ONE METHOD, THE NEXT LOCKED DOOR

The same method just opened a full DAW: **FLSpeaks**.

FLSpeaks

SPOKEN ACCESS TO FL STUDIO · ZERO SETUP

The same bridge as AccessBridge: a small component runs **inside FL Studio**, reaches its own in-process scripting and state, reads the live session and speaks it — and drives it — with **zero setup**. Its crown feature: surfacing **FL Studio's own hint messages** as speech. The end-to-end bridge is proven; it's in active build now.

“FL Studio cannot be used with screen readers.”

— IMAGE-LINE SUPPORT KNOWLEDGE BASE · THE GAP IS STILL OPEN
IN 2026

One method. **Two doors — and a pipeline.**

FL Studio is one of the world's most popular DAWs and a favorite for hip-hop, trap and electronic beatmaking — sold with lifetime free updates, editions from \$99. REAPER (with the free OSARA extension) and Apple's Logic Pro are usable by blind producers; FL Studio and Ableton Live are not — **FLSpeaks would be the first for FL Studio**. Demand is real and organized — AppleVis, ReaperAccessible, BlindProducers.org — against a WHO backdrop of at least 2.2 billion vision-impaired people. One method opened a DJ app and now a full DAW: **Visionary is a repeatable accessibility company with a pipeline, not a single app.**

Overdue, and right on time.

2.2B

at least 2.2 billion people live with a **vision impairment** (WHO); roughly 43 million of them blind — locked out of the professional software the world runs on. Access is dignity and livelihood, not charity.

2025

The **European Accessibility Act** has been in force across the EU since June 2025 (EN 301 549 / WCAG 2.1 AA); in the US, the DOJ's ADA Title II rule sets the same WCAG 2.1 AA bar, with large public entities required to comply by April 2027 — amid roughly 3,100 federal web-accessibility lawsuits filed in 2025. A shipped solution is compliance and reputation insurance.

Built for the blind — better for everyone.

Captions, voice control and screen readers all began as “for a few” and became “for everyone.” The same engine that names a controller by ear is a powerful hands-free layer for any DJ. The wedge: the default accessibility layer for the two dominant platforms — with a natural path to licensing the vendors themselves.

Credibility no engineering team can buy.

DJ Breezy Wonder

PRODUCER • ENGINEER • DRUMMER • LIVE-SOUND • DJ

A blind producer, mix & mastering engineer, and DJ — with production credits alongside artists the culture knows.

He didn't commission this from a lab. He built the thing he needed, because he is exactly the DJ it's for.

The person who feels every missing detail is the person designing it.

The proof is **already built** — alone, on my own dime.

Months

full-time and unpaid — before asking for a cent

~30K

lines of Swift / C++, written by hand

470+

automated tests — every feature proven on real hardware

\$0

outside funding to date — entirely self-funded

Built on my **own 2021 MacBook Pro M1**, with the DJ controllers and hardware bought out of pocket, and every feature proven on the real gear. No team, no grant, no runway — just the work.

I'm not asking you to bet on an idea — the proof is already built, alone, on my own dime. The \$50,000 is fuel for a fire that's already lit.

Raising \$50,000 for Visionary Software LLC.

\$50K

A **12-month pre-seed** — one founder, full-time — to ship AccessBridge 1.0 and stand up a studio that builds **accessible-first professional software**. AccessBridge is product #1: the launch product, and the proof the model works — with FLSpeaks, product #2, already proven and in active build.

“All I own today is a 2021 MacBook Pro M1 and a dream.”

– DJ BREEZY WONDER, FOUNDER

The playbook: find where the industry **locked people out**, build the bridge, own the niche — then run it again on the next locked door. **FLSpeaks is that door, already in build.**

Where the \$50,000 goes.

\$50,000

12-month pre-seed · solo founder, full-time
“a 2021 MacBook Pro M1 and a dream”

Founder runway

Below-market ~\$1,800/mo living stipend, 12 months full-time — the top input

Ship AccessBridge 1.0

Apple + Windows code signing, license-server hosting, HID / Pro-DJ-Link, Windows port

Hardware & test rig

Controllers (Pioneer, Denon, Numark, Rane, Hercules), CDJ/XDJ access, audio I/O

Accessibility QA, docs & onboarding

Paid blind-DJ beta, blind-first docs + audio tutorials, zero-sighted first run, WCAG 2.2

Company formation, legal & IP

LLC + registered agent, AccessBridge / Visionary trademark, accounting, counsel

Launch, marketing & community

Hosting + domain, a modest ad budget into blind-DJ communities, demos, content

Contingency

Reserve for the walls a real build hits — a different controller, an OS shift, a cert cost

What \$50K delivers: AccessBridge 1.0 on macOS + Windows in paying hands · full controller coverage · first revenue · the company formed.

First revenue is direct — the bigger doors open next.

ON NOW • DIRECT

Licenses to blind DJs

Sell AccessBridge straight to the community that's been asking for it — first dollars in the door as 1.0 ships.

ENDORSE & BUNDLE

Technology license

Serato or Algoriddim bundle or endorse it; the studio keeps serving the community that champions it.

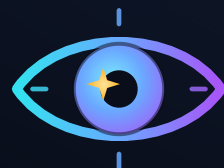

ALL THE WAY

License or acquisition

Exclusive license or acquisition — including the founder who understands it top to bottom.

STRONGEST OPENING

A paid pilot with a live demo — a blind DJ running your flagship, on stage-standard hardware, with zero setup. See it once and the case makes itself.

VISIONARY SOFTWARE LLC

From me, to the world.

Launch product: AccessBridge — Serato DJ Pro & djay Pro, playable by ear.

Built by one founder, by hand — every line, every test. The investors, backers and donors who join now aren't a cap table — they're the family that opens the first door, and every door after.
