

We build the way in.

A studio shipping **accessible-first professional software** — we find where the industry locked people out (disability, price, or design), build the bridge, and own the niche. **Launch product: AccessBridge** — a macOS menu-bar app that lets a blind DJ run Serato DJ Pro & djay Pro entirely by ear, zero setup; in testers' hands now.

THE PROBLEM

2/124

SERATO ELEMENTS
A READER CAN READ

DJ software is built to be **seen** — waveforms, library, cues, effects. A screen reader gets almost nothing: of Serato's entire interface it can read just **2 of 124 elements**. Serato was screen-reader usable through version 1.7; the 1.8 interface rebuild broke that access, and Serato has never restored it. Virtual DJ's custom skinned interface is not compatible with screen readers; blind users depend on a third-party workaround, not native support. Talent was never the barrier — access was.

WHAT IT DOES

- **Reads the software from the inside.** Serato's live state directly — deck, time, key, BPM, cues, effects, crates; djay via the Mac's accessibility system. Read-only, no screen capture, no fake clicks.
- **Names the controller under your hands.** Every knob, pad and fader announces itself the instant you touch it — in both Serato and djay, with zero setup.
- **Speaks, and drives.** One clean voice (can speak through the DJ's own screen reader) and drives back — load a track, set a cue, sort the library, jump a beat.
- **Tells the truth.** Nothing is guessed; if a value can't be read, it says so rather than inventing it — the trust a tool needs mid-set.

STATUS & PROOF

~30K

lines of Swift / C++, built & rebuilt

470+

automated tests, proven on real hardware

macOS

shipping-quality build, in testers' hands

Windows

port fully specified & scaffolded

Product two — FLSpeaks · in active build. The same bridge, now for **FL Studio**: a component inside the DAW reads the live session and speaks it — crown feature, voicing FL's own hint messages — and drives it, zero setup. Image-Line's own support base: **"FL Studio cannot be used with screen readers"** (still open in 2026). REAPER (OSARA) and Logic work for blind producers; FL Studio and Ableton don't — **FLSpeaks would be the first**. One method, two doors: a pipeline, not one app.

MARKET & THE MOMENT

2.2B

at least 2.2 billion people live with a vision impairment (WHO); ~43 million of them blind — locked out of the professional software the world runs on. Access is dignity and livelihood, not charity.

2025

The **European Accessibility Act** has been in force EU-wide since June 2025 (WCAG 2.1 AA); the US DOJ's ADA Title II rule sets the same bar, with large public entities due by April 2027 — amid ~3,100 federal web-accessibility suits filed in 2025. A shipped solution is compliance and reputation insurance.

ADA+

Built for the blind, better for everyone — the same engine is a hands-free layer for any DJ. AccessBridge is the first door; **Visionary Software exists to open the rest.**

THE RAISE — \$50,000

\$50,000 · 12-month pre-seed, solo founder full-time — to ship AccessBridge 1.0 and stand up a studio that builds **accessible-first professional software**. AccessBridge is product #1; FLSpeaks (product #2) is already proven and in active build.

Founder runway · 12 mo		\$22K 44%
Ship AB 1.0 · Win, HID		\$9K 18%
Hardware & test rig		\$7K 14%
Accessibility QA & docs		\$4K 8%
Company, launch & buffer		\$8K 16%

Covers: below-market living stipend · code signing, license server, Windows/HID · controller & CDJ/XDJ rig · blind-DJ beta + WCAG 2.2 · LLC, trademark, launch & contingency.

Already all-in — months of unpaid full-time work, ~30K lines, 470+ tests, hardware out of pocket, on a 2021 MacBook Pro M1, zero outside funding. **The \$50,000 is fuel for a fire already lit** — a family, not a cap table.

How it returns: a paid pilot, then licenses to blind DJs, a vendor bundle, or acquisition. See a blind DJ run your flagship, zero setup — the case makes itself.
