

Serato DJ Pro & djay Pro, **playable by ear.**

A macOS menu-bar app that lets a **blind DJ** run the two industry-standard programs **entirely by ear** — no sighted help, zero setup. Built by a blind DJ, DJ Breezy Wonder. In testers' hands now; ~30,000 lines of Swift/C++, 470+ automated tests, Windows port scaffolded.

THE PROBLEM

2/124

SERATO ELEMENTS
A READER CAN READ

DJ software is built to be **seen** — waveforms, library, cues, effects. A screen reader gets almost nothing: of Serato's entire interface it can read just **2 of 124 elements**. Access broke at v1.8 and was never restored. A Serato planner: *"we never intentionally supported those programs"*; Virtual DJ's CTO said its dialogs *"would break screen readers."* Talent was never the barrier — access was.

WHAT IT DOES

- **Reads the software from the inside.** Serato's live state directly — deck, time, key, BPM, cues, effects, crates; djay via the Mac's accessibility system. Read-only, no screen capture, no fake clicks.
- **Names the controller under your hands.** Every knob, pad and fader announces itself the instant you touch it — in both Serato and djay, with zero setup.
- **Speaks, and drives.** One clean voice (can speak through the DJ's own screen reader) and drives back — load a track, set a cue, sort the library, jump a beat.
- **Tells the truth.** Nothing is guessed; if a value can't be read, it says so rather than inventing it — the trust a tool needs mid-set.

STATUS & PROOF

~30K

lines of Swift / C++, built & rebuilt

470+

automated tests, proven on real hardware

macOS

shipping-quality build, in testers' hands

Windows

port fully specified & scaffolded

MARKET & THE MOMENT

2.2B **vision-impaired worldwide** (WHO); tens of millions are blind — a real, vocal DJ community asking for exactly this.

2025 **EU Accessibility Act** takes effect; ADA enforcement expands. A shipped solution is compliance and reputation insurance.

ADA+ **Built for the blind, better for everyone** — the same engine is a hands-free layer for any DJ.

THE ASK

- **Consulting / integration** — fund building it into the product.
- **Technology license** — bundle or endorse it.
- **Exclusive license or acquisition** — with the maker.

Strongest opening: a paid pilot + live demo — a blind DJ running your flagship on stage-standard hardware, zero setup. See it once and the case makes itself.
